Krumhansl-Schmuckler key-finding algorithm

- The best key assignment is the key which generates the highest Pearson correlation between a pitch histogram extracted from the music compared to major/minor key prototypes

Pearson correlation (normalized correlation):

$$R(x,y) = \frac{\sum (x_n - \bar{x})(y_n - \bar{y})}{\sqrt{\sum (x_n - \bar{x})^2 \sum (y_n - \bar{y})^2}}$$

Pitch-class histogram

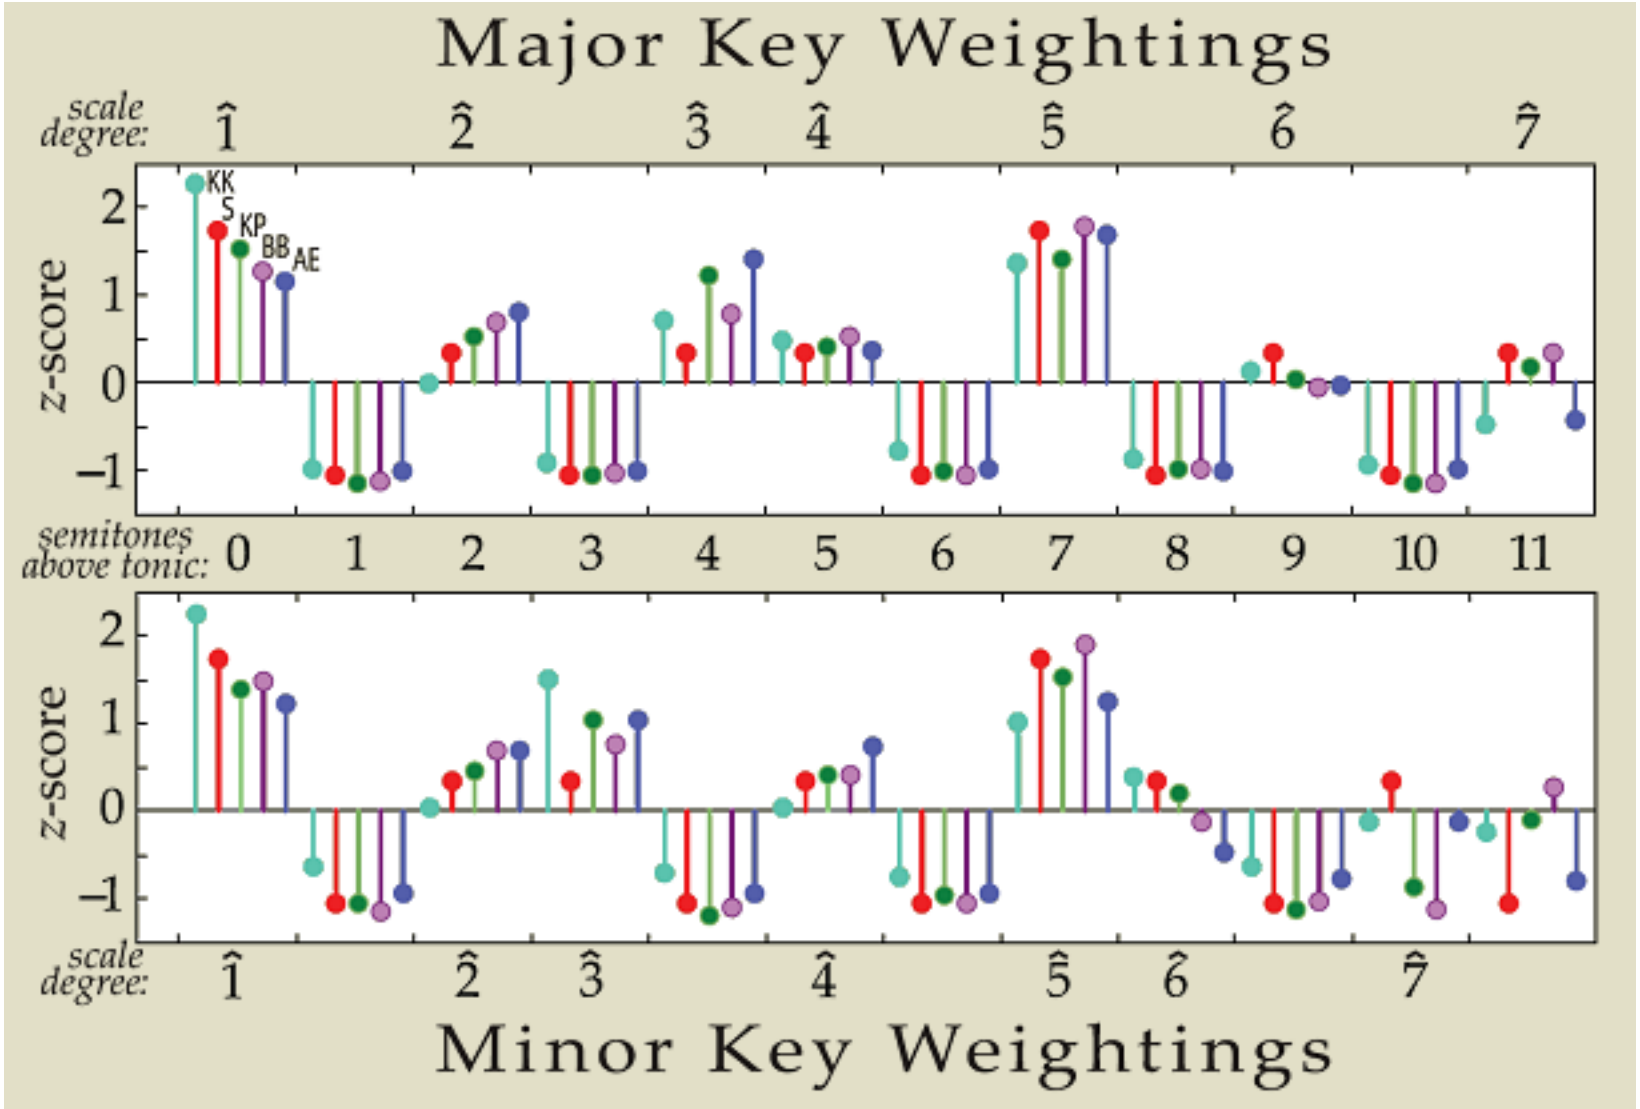
extracted histogram as a 12-dimensional vector: (8, 0, 0, 0, 2, 11, 0, 5, 7, 0, 5, 2)

Prototype weights

scale degree	*semi-tones above tonic*	KK	AE	KP	BB	LC
		Major Key Weights				
1	0	6.35	17.77	0.748	16.80	2
	1	2.23	0.15	0.060	0.86	0
2	2	3.48	14.93	0.488	12.95	1
	3	2.33	0.16	0.082	1.41	0
3	4	4.38	19.80	0.670	13.49	1
4	5	4.09	11.36	0.460	11.93	1
	6	2.52	0.29	0.096	1.25	0
5	7	5.19	22.06	0.715	20.28	2
	8	2.39	0.15	0.104	1.80	0
6	9	3.66	8.15	0.366	8.04	1
	10	2.29	0.23	0.057	0.62	0
7	11	2.88	4.95	0.400	10.57	1
		Minor Key Weights				
1	0	6.33	18.26	0.712	18.16	2
	1	2.68	0.74	0.084	0.69	0
2	2	3.52	14.05	0.474	12.99	1
3	3	5.38	16.86	0.618	13.34	1
	4	2.60	0.70	0.049	1.07	0
4	5	3.53	14.44	0.460	11.15	1
	6	2.54	0.70	0.105	1.38	0
5	7	4.75	18.62	0.747	21.07	2
6	8	3.98	4.57	0.404	7.49	1
	9	2.69	1.93	0.067	1.53	0
7	10	3.34	7.38	0.133	0.92	1
	11	3.17	1.76	0.330	10.21	0

Prototype comparisons

Unnormalized major-key simple weights: (2, 0, 1, 0, 1, 1, 0, 2, 0, 1, 0, 1)



KS algorithm (2)

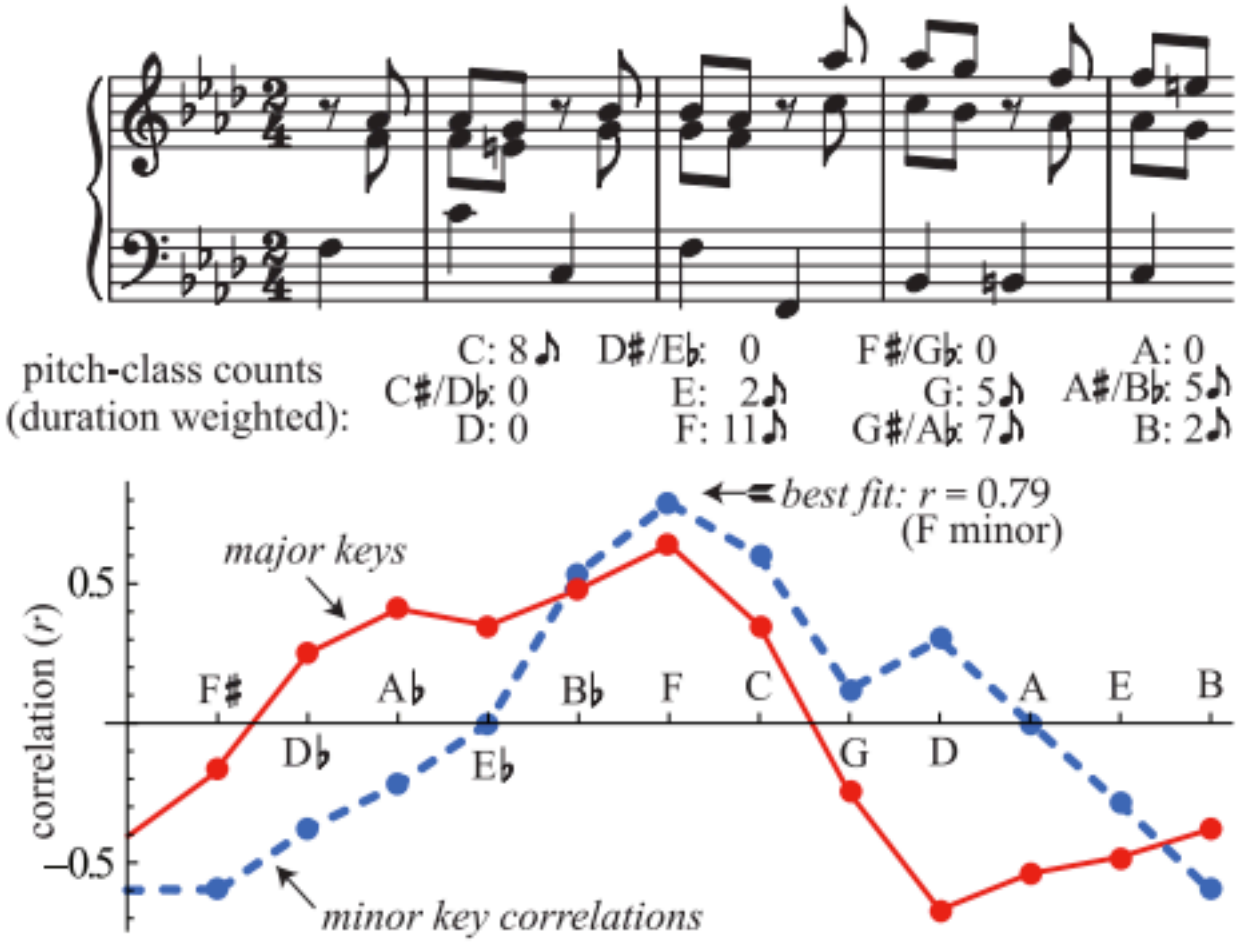
$$R(x,y) = \frac{\sum (x_n - \bar{x})(y_n - \bar{y})}{\sqrt{\sum (x_n - \bar{x})^2 \sum (y_n - \bar{y})^2}}$$

$$\text{key}_k = \arg\max_k R(x, y_k)$$

$$\text{key}_k = \arg\max_k \frac{1}{N} \sum_n z_{x,n} \; z_{y_k,n}$$

dot product of normalized vectors

Key correlation spectrum



pitch-class histogram: $x = (8, 0, 0, 0, 2, 11, 0, 5, 7, 0, 5, 2)$

major key prototype: $y_M = (2, 0, 1, 0, 1, 1, 0, 2, 0, 1, 0, 1)$

minor key prototype: $y_m = (2, 0, 1, 1, 0, 1, 0, 2, 1, 0, 1, 0)$

Key correlation spectrum (2)

keycor -a -s h://wtc/wtc2p12.krn

The best key is: F Minor

Major[0] = -0.0469801	Minor[0] = 0.629898
Major[1] = 0.664563	Minor[1] = -0.138204
Major[2] = -0.853396	Minor[2] = -0.194762

Humdrum program documentation

hint –h gives one-page summary of *hint* command (same for all Humdrum Toolkit programs)
tntype --options list options for serialize command (same for all Humdrum Extras programs)

Humdrum Toolkit man pages:
http://www.humdrum.org/Humdrum/commands/hint.html

Humdrum Extras man pages:
http://extras.humdrum.org/man/tntype

Chapter 15 in the Humdrum Users' Guide (Harmonic Intervals):
http://www.humdrum.org/Humdrum/guide15.html

List of various Humdrum resources:
http://humdrum.ccarh.org

hint -a

- -a option shows intervals for all note permutations, not just “stacked intervals”

hint –a chor001.krn > hinta.txt

```

Most common harmonic interval

hint –ac chor001.krn | serialize –c | ridx –H | sort | uniq –c | sort -nr

1. hint –ac chor001.krn: do harmonic interval analysis (Humdrum Toolkit)
2. serialize –c: force intervals one to a line (Humdrum Extras)
3. ridx –H: remove Humdrum file structure from data (Humdrum Extras)
4. sort: sort lines alphabetically (Unix)
5. uniq –c: output lines without repetitions, counting occurrences (Unix)
6. sort –nr: sort numerically, in reverse order (largest count first) (Unix)

ditto

- *hint* ignores null tokens, resulting in harmonic intervals between note attacks only
- To also include intervals to sustained intervals from previous attacks, use *ditto*
- This fills in the null token with the continuing data token it represents

ditto chor001.krn

tntype

Tool for generalized description of sonority types (pitch-class sets sounding together)

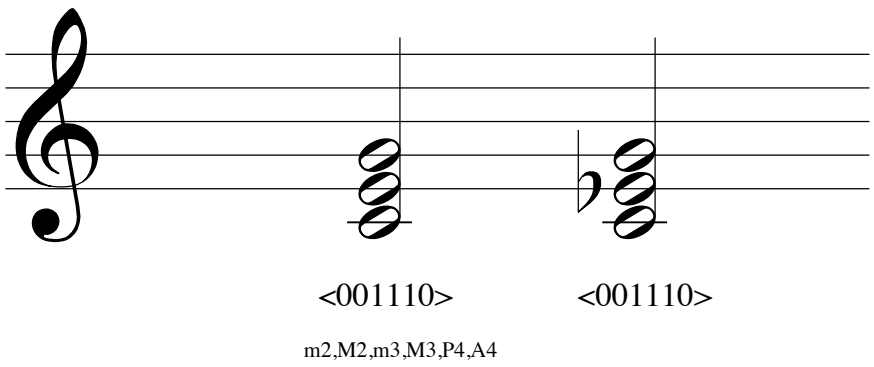
documentation: http://extras.humdrum.org/man/tntype

similar to Humdrum Toolkit command pcset http://www.humdrum.org/Humdrum/commands/pcset.html

seven successive “sonorities” present in the above music:

Interval vectors

- Similar data generated by *hint*, but more compact



- Major and minor triads have the same interval content: m3, M3, P5
- <001110> is can be represented by the Forte number enumeration 3-11.
  - 3 = three pitch classes in set
  - 11 = 11th most compact organization of 3 pitch classes

    3-1 = c,c#,d 3-2 = c,c#,d# 3-3 = c,c#,e 3-4 = c,c#,f 3-5 = c,c#,f# etc.

tntype -d

Generate a **dpc (diatonic pitch-class) spine listing unique pitch classes in sonorities

tntype –ad file.krn

```
**kern   **kern   **kern   **kern   **num   **dpc

Bach chorale sonority types

- Are there more major or minor sonorities in Bach chorales?

By musical description:

```
humcat -s h://371chorales | tntype -D | ridx –H | sort | uniq -c | sort -nr
```

By Forte number:

```
humcat -s h://371chorales | tntype | ridx –H | sort | uniq -c | sort -nr
```

- Do Bach chorales in minor keys have more major or minor sonorities?

```
humcat –s h://371chorales | humsplit
humcat -s `egrep –l "^\*[a-g][#-]?:" chor*.krn` | tntype -D | ridx –H | sort | uniq -c | sort -nr
```

- What is the most common 7th chord sonority?

sonority

- similar to tntype program but has more triad-centered descriptions of sonorities

http://extras.humdrum.org/man/sonority

sonority -a h://371chorales/chor001.krn
