Humdrum melodic tools

craig@ccrma.stanford.edu

5 / 7 April 2016

Project Proposal

- Due next Tuesday

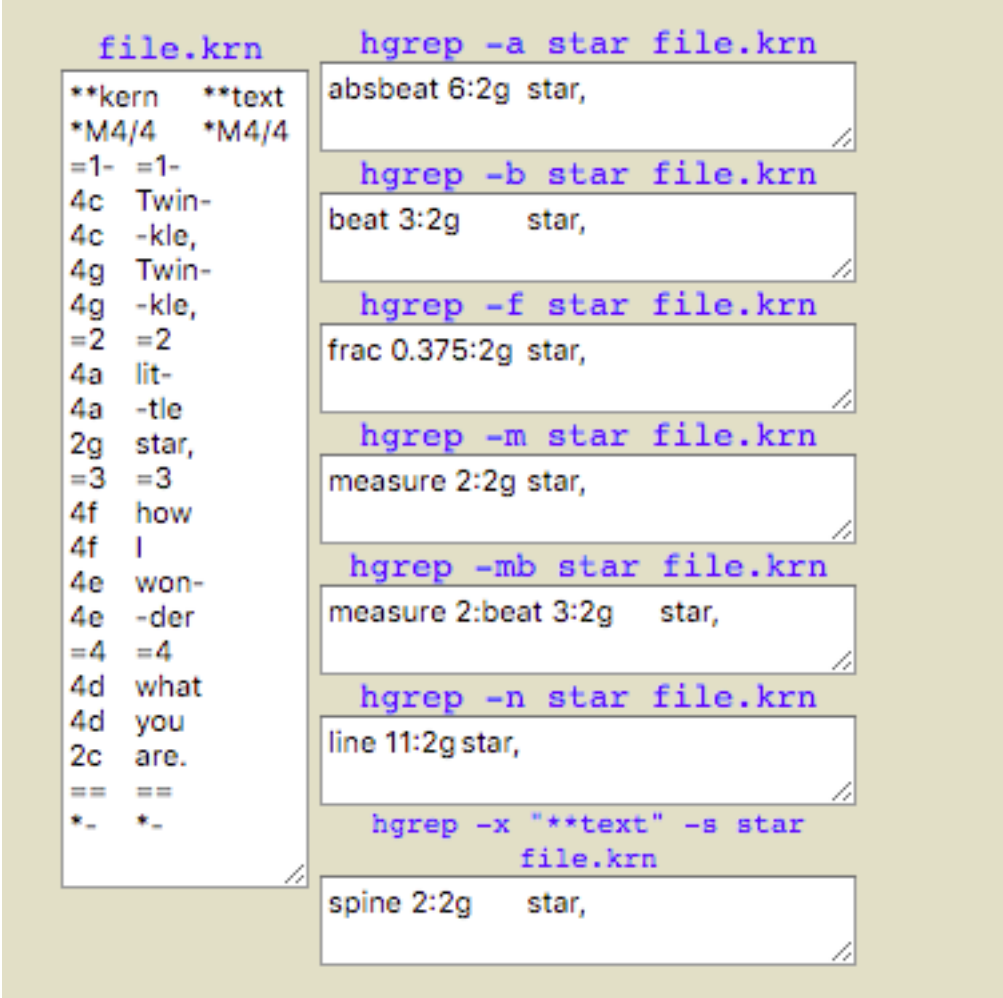
- ~ 2 pages:
  - What you want to do.
  - Literature search: similar projects in the past.
  - Background information.
  - How you are planning on proceeding.
  - What technology you are planning on using.

hgrep HE

"Humdrum GREP": grep program which knows about Humdrum file structure

Documentation: http://extras.humdrum.org/man/hgrep

-m: list measure number which match occurs in
-b: list beat number in measure which match occurs on
-a: list absolute quarter note
-f: list fractional position of match (-a option divided by duration of score)
-n: list line number of match



hgrep

- Identify which chorale has +P15 melodic leap:

```
humcat –s h://chorales | mint -s [_[]  | hgrep -Hm P15
chor024.krn:measure 2:+15   +P8   +m3   +M3
```

Or with pre-downloaded data:

```
mkdir chorales && cd chorales
humsplit h://chorales
humcat –s *.krn | mint -s [_[]  | hgrep -Hm P15
chor024.krn:measure 2:+15   +P8   +m3   +M3
```

Another variation, storing all chorales in one file:

```
humcat -s h://chorales > chorales.krns
cat chorales.krns| mint -s [_[]  | hgrep -Hm P15
chor024.krn:measure 2:+15   +P8   +m3   +M3
```

myank HE

- pull out music around two-octave leap in bass part:

myank -m 1-3 h://chorales/chor024.krn

```

```

hgrep + tntype

Find and mark all triadic sonorities:

humcat -s h://chorales/chor001.krn | tntype -a | hgrep --mark 3-11

```
=20     =20     =20     =20     =20
8EL]@   2e@     2g@     4b@     3-11A
8DJ     .       .       .       4-26
4C      .       .       2a@     4-26
4D@     8dL@    4f#@    .       3-11B
.       8cJ     .       .       4-27B
=21     =21     =21     =21     =21
2GG;@   2B;@    2d;@    2g;@    3-11B
==      ==      ==      ==      ==
```

humcat -s h://chorales/chor001.krn | satb2gs | autostem | tntype -a | hgrep --mark 3-11 \
| hum2muse | muse2ps =z14j | ps2pdf -sPAPERSIZE=letter - - > output.pdf

hgrep + sonority

Find all French 6th sonorities in Bach chorales:

```
for i in *.krn
do
   sonority –a $i > $i.sonority
done
hgrep –Hm french *.sonority
```

chor146.krn.sonority:measure 4:8FnJ 8BJ 8d#J . french6:0:F

```
satb2gs chor146.krn | autostem | sonority -a  | hgrep --mark french | hum2muse \
   | muse2ps =z14j | ps2pdf -sPAPERSIZE=letter - - > output.pdf
```

muse2ps

https://github.com/musedata/muse2ps

Documentation: http://muse2ps.ccarh.org

https://github.com/musedata/beethoven-quartets

http://wiki.ccarh.org/wiki/Beethoven_String_Quartets

hum2muse[HE] / muse2ps

Make a PDF file:

```
myank  -m 1-3  h://chorales/chor024.krn | autostem | hum2muse | muse2ps =z18j \
    | ps2pdf –sPAPERSIZE=letter - - > output.pdf
```

Make a PNG image:

```
myank  -m 1-3  h://chorales/chor024.krn | autostem | hum2muse | muse2ps =z18j \
    | pstopnm –dpi=300 | convert - -trim –resize 50% output.png
```

hum2abc / abcm2ps

http://extras.humdrum.org/man/hum2abc
http://moinejf.free.fr

```
myank  -m 1-3  h://chorales/chor024.krn | hum2abc –n1 | abcm2ps - -O -  \
    | ps2pdf –sPAPERSIZE=letter - - > output.pdf
```

```
myank  -m 1-3  h://chorales/chor024.krn | hum2abc –n1 | abcm2ps - -O - \
    | pstopnm –dpi=300 | convert - -trim –resize 33% output.png
```

ms / mup

http://www.humdrum.org/Humdrum/commands/ms.html
http://www.arkkra.com

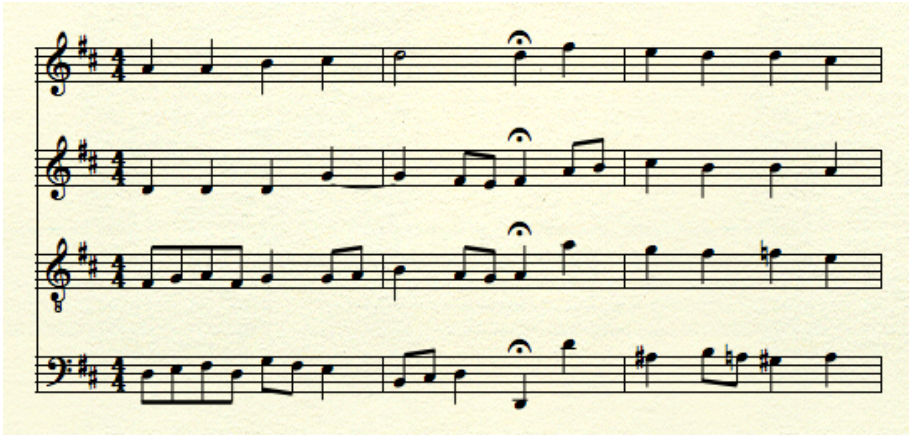
```
myank  -m 1-3  h://chorales/chor024.krn | ms | ps2pdf –sPAPERSIZE=letter - - > output.pdf

myank  -m 1-3  h://chorales/chor024.krn | ms -z | mup  \
    |  ps2pdf –sPAPERSIZE=letter - - > output.pdf
```

hum2xml / MuseScore | Finale | Sibelius | Noteflight

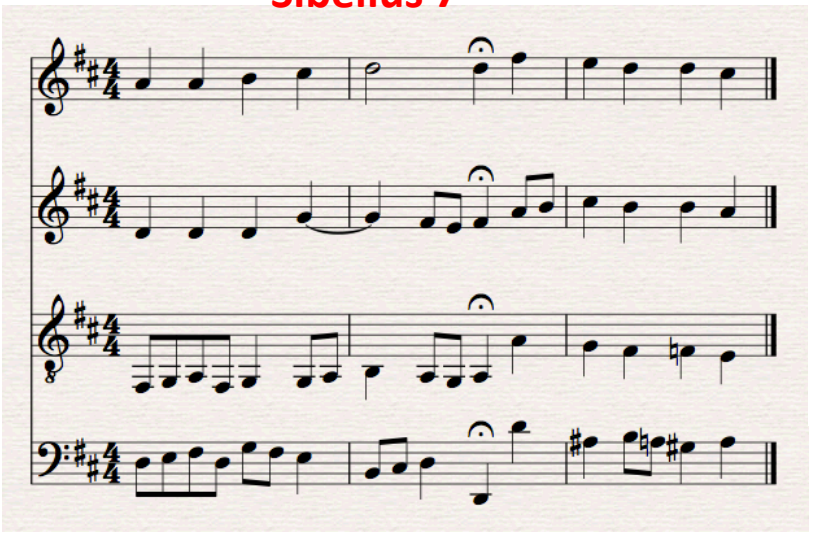
myank –m 1-3 h://chorales/chor024.krn | autostem | hum2xml > output.xml

Finale 2012



MuseScore 1.2

Sibelius 7



Noteflight

hum2xml / musicxml2ly / lilypond

```
myank –m 1-3 h://371chorales/chor024.krn | hum2xml | musicxml2ly - -o- \
    | lilypond  -f pdf –o output
```

- *autostem* feature built into lilypond, so does not need to be used before converting

auto-beaming

myank –m 1-3 h://371chorales/chor024.krn | hum2xml | grep -v beam \
| musicxml2ly -o- - | lilypond -o output -

myank –m 1-3 h://371chorales/chor024.krn | hum2xml | grep -v beam \
| musicxml2ly --no-beaming -o- - | lilypond -o output -

Essen Folksongs

http://kern.ccarh.org/browse?l=/essen

scaletype

http://extras.humdrum.org/man/scaletype

Simple categorization of of scales by pitch classes used in a file:

- 8+ pitch classes: “chromatic”
- 7 pitch classes: “heptatonic”
- 6 pitch classes: “hexatonic”
- 5 pitch classes: “pentatonic”
- <5 pitch classes: “too few”

```
humcat –s h://folk/china > china.krns
humcat –s h://folk/germany > germany.krns

scaletype –F china.krns | sort | uniq -c | sort –nr
scaletype –F germany.krns | sort | uniq –c | sort -nr
```

Chinese songs

```
1096 pentatonic
 706 hexatonic
 282 heptatonic
 117 toofew
  40 chromatic
```

Germany songs

```
2558 heptatonic
1415 hexatonic
 842 chromatic
 434 pentatonic
 104 toofew
```

sortcount script

- PERL script to elaborate the pipeline:

  | sort | uniq –c | sort -nr

```
#!/usr/bin/perl
use strict;
use Getopt::Long;

my $alphabeticQ = 0;  # -a: sort output lines alphabetically
my $percentQ    = 0;  # -p: show counts as percentages
my $fractionQ   = 0;  # -f: show counts as fractions
my $totalQ      = 0;  # -t: show total count of input lines
my $smallQ      = 0;  # -s: sort by smallest numbers first
my $humdrumQ    = 0;  # -h: output data in Humdrum file format

Getopt::Long::Configure("bundling");
GetOptions (
    'a|alphabetic'       => \$alphabeticQ,
    'p|percent'          => \$percentQ,
    'f|fraction'         => \$fractionQ,
    't|totalQ'           => \$totalQ,
    's|smallQ'           => \$smallQ,
    'h|humdrum'          => \$humdrumQ,
);

my @contents = <>;

my (%unique, $line, @output, $sum, $key, @output2, $value, @keys);
```

sortcount (2)

```
foreach $line (@contents) {
   $unique{$line}++;
}
@keys = keys %unique;
@keys = sort @keys if $alphabeticQ;
foreach $key (@keys) {
   $sum += $unique{$key};
   $output[@output] = $key;
}
if    ($humdrumQ && $percentQ)  { print "**pcent\t**data\n"; }
elsif ($humdrumQ && $fractionQ) { print "**frac\t**data\n";    }
elsif ($humdrumQ)               { print "**count\t**data\n";   }

foreach $key (@keys) {
   if    ($percentQ)  { $value = int(10000.0*$unique{$key}/$sum + 0.5)/100.0; }
   elsif ($fractionQ) { $value = int(1000.0*$unique{$key}/$sum + 0.5)/1000.0; }
   else               { $value = $unique{$key}; }
   $output2[@output2] =  "$value\t$key";
}
if ($smallQ && !$alphabeticQ) {
   @output2 = sort { $a <=> $b } @output2;
} elsif (!$alphabeticQ) {
   @output2 = sort { $b <=> $a } @output2;
}
print join("", @output2);

print "*-\t*-\n" if $humdrumQ;
if ($totalQ) {
   print "!!" if $humdrumQ;
   print "TOTAL:\t$sum\n";
}
```

sortcount (3)

scaletype china.krns -F | sortcount -hpt

```
**pcent    **data
48.9       pentatonic
31.5       hexatonic

!!TOTAL:   67
```

Melodic searching

- search engine behind http://themefinder.com and http://jrp.ccarh.org

- **tindex**: generate thema search index — http://extras.humdrum.org/man/tindex
- **themax**: perform search on index — http://extras.humdrum.org/man/themax
- **theloc**: mark matches in original data — http://extras.humdrum.org/man/theloc

```
humcat –s h://folk/china > china.krns
humcat –s h://folk/germany > germany.krns

tindex china.krns > china.tindex
tindex germany.krns > germany.tindex
```

Searching by diatonic pitch name

themax -p "cdfga" china.tindex --total

Display matched notes

```
themax –p “cdefg” china.tindex --total --loc | head –n1 | theloc –m \
    | autostem | hum2muse  =z21j | muse2ps | pstopnm –dpi=300 \
    | convert - -trim –resize 50%  output.png
```

Parallel feature searching

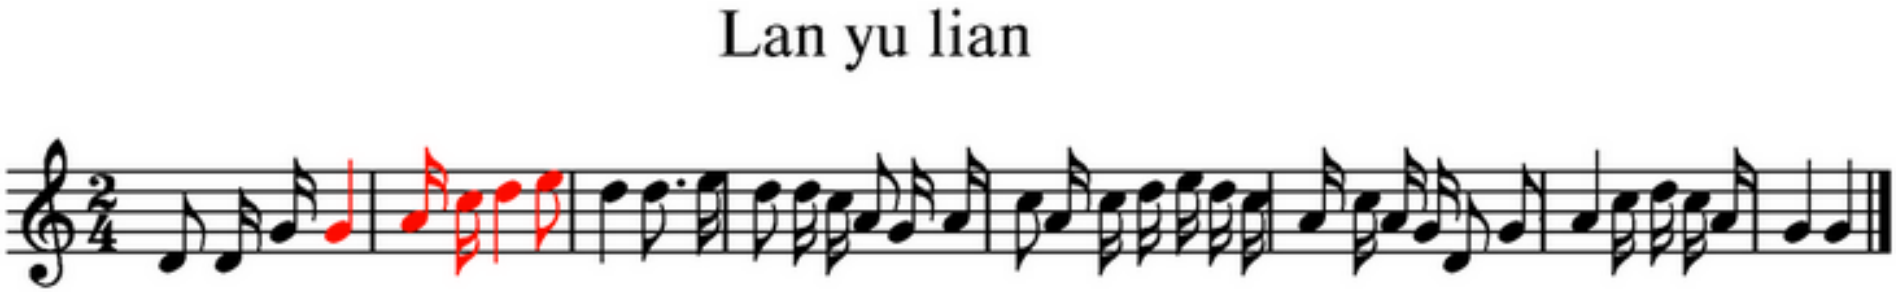
- search for the pitch-class sequence “cdefg” where sequence always rises

```
themax –p “cdefg” –C “uuuuu” china.tindex –total –loc | head –n1 | theloc –m \
    | autostem | hum2muse  =z21j | muse2ps | pstopnm –dpi=300 \
    | convert - -trim –resize 50%  output.png
```

Parallel feature searching (2)

- search for the semi-tone interval sequence +2 +3 +2 +2 starting on a “G”

```
themax –p “g” -I “+2 +3 +2 +2” china.tindex –total –loc | head –n1 | theloc –m \
    | autostem | hum2muse  =z21jc60 | muse2ps | pstopnm –dpi=300 \
    | convert - -trim –resize 50%  output.png
```



context

http://www.humdrum.org/Humdrum/commands/context.html

- Create lists of successive elements (n-grams)
- Raw data for generating transition probabilities (Markov chains)

Melodic intervals across fermata

```
extractx -g bass chorales.krns | sed 's/;/ r/'  \
   | kern -x | grep -v ^[0-9.]*r | serialize –c \
   | grep -v = | context -n 3 | ridx –H |  grep r \
   | egrep -v '^r|r$' | sed 's/ r /\t/' > fermata.krn
```

- Edit fermata.krn to add “**kern **kern” at top of file and “*- *-” at bottom of file (or write a script to do that).

```
hint –v fermata.krn| ridx -H | sortcount -pht
