Humdrum program documentation

timebase –h gives one-page summary of *mint* command (similar for all Humdrum Toolkit programs)
beat --options list options for serialize command (same for all Humdrum Extras programs)

Humdrum Toolkit man pages:
http://www.humdrum.org/Humdrum/commands/timebase.html

Humdrum Extras man pages:
http://extras.humdrum.org/man/beat

Chapter 23 in the Humdrum Users' Guide (Rhythm):
http://www.humdrum.org/Humdrum/guide23.html

List of various Humdrum resources:
http://humdrum.ccarh.org

Humdrum Users' Group (**HUG):
https://groups.google.com/forum/?fromgroups#!forum/starstarhug

}
```

gettime

http://extras.humdrum.org/man/gettime

- Calculate the performance time in seconds/milliseconds for a score.

gettime –T :: calculate the total performance duration of the score(s)

gettime –T h://chopin/preludes/prelude28-01.krn
Total time: 25.5 seconds

gettime –T h://chopin/preludes
Total time: 31:05.83537 minutes

gettime –T h://chopin/mazurkas
Total time: 1:51:39.4903 hours

thrux h://beethoven/sonatas | gettime –T
Total time: 9:23:55.3539 hours

thrux –v norep h://beethoven/sonatas | gettime –T
Total time: 7:44:52.8678 hours

Longest Beethoven sonata

```
humsplit h://beethoven/sonatas
for i in `seq -w 32`
do
    echo Sonata $i `cat sonata$i* | thrux | gettime -T | tail -n 1`;
done | sort -n -k 2 -t :
```

Sonata 09 Total time: 15:33.7273 minutes

8d
12e
12e
12e
*-
```

24

scordur

Scordur h://chopin/preludes/prelude28-01.krn
34 (quarter notes)

Useful for checking the duration of parts before assembling into a score

timebase

http://www.humdrum.org/Humdrum/commands/timebase.html

- Insert null-tokens lines to make all data lines represent the same duration.
- Use minrhy to calculate the time unit to use with timebase
- Data loss if timebase rhythm is too large
- Grace notes are lots (should be fixed by converting to reversible comments)

```

```

assemble

- Reverses the process of extract command, joining parts into full score

1. Calculate the minimum rhythmic unit (least common multiple of all rhythms in the input to assemble).
2. Apply timebase at that minimum rhythm (warning about grace notes)
3. Run assemble command
4. Remove null-token lines

file1.krn

```
**kern
*M3/4
=1-
4c/
8aL/
8aL/
4c/
==
*-
```

file2.krn

```
**kern
*M3/4
=1-
4cc\
12ccL\
12cc\
12ccJ\
4cc\
==
*-
```

```
minrhy file1.krn file2.krn
file1.krn:      8
file2.krn:     12
all:           24

timebase –t 24 file1.krn > t1.krn
timebase –t 24 file2.krn > t2.krn
assemble t2.krn t1.krn | rid –d > score.krn
```

partjoin

- timebase command eats grace notes (**kern notes which contain “q” character)
- partjoin script automates minrhy/timebase/assemble & handles grace notes

```
#!/usr/bin/perl
use strict;
my @files = @ARGV;
die "Usage: $0 file1 file2 ...\n" if @files < 2;
my $filelist = join(" ", @files);
my $minrhy = `minrhy $filelist`;
$minrhy =~ /all:\s*(\d+)/;
$minrhy = $1;
my @assemblefiles;
foreach my $file (@files) {
  my $contents = getContents($file);
  open (PROCESS, "|timebase -t $minrhy > $file-timebase$minrhy") or die;
  print PROCESS $contents;
  close PROCESS;
  $assemblefiles[@assemblefiles] = "$file-timebase$minrhy";
}
my $assemblelist = join(" ", reverse @assemblefiles);
my $result = `assemble $assemblelist | rid -d | grep -v "^\*tb"`;
printResult($result);
`rm -f $assemblelist`;
exit(0);
```

```
sub getContents {
  my ($file) = @_;
  open (FILE, $file) or die;
  my @contents = <FILE>;
  for (my $i=0; $i<@contents; $i++) {
    my $line = $contents[$i];
    next if $line =~ /^!/;
    next if $line =~ /^\*/;
