Harmony Tools in Humdrum I

craigsapp@stanford.edu

29 March 2016

Installing Humdrum Tools

Best way is by using git to download from github:

https://github.com/humdrum-tools/humdrum-tools

Windoze: first install Cygwin: http://www.cygwin.com

Above contains two software packages for processing Humdrum data files:

https://github.com/humdrum-tools/humdrum "Humdrum Toolkit"

https://github.com/humdrum-tools/humextra "Humdrum Extras"

Websites:

"Humdrum Toolkit" https://www.humdrum.org

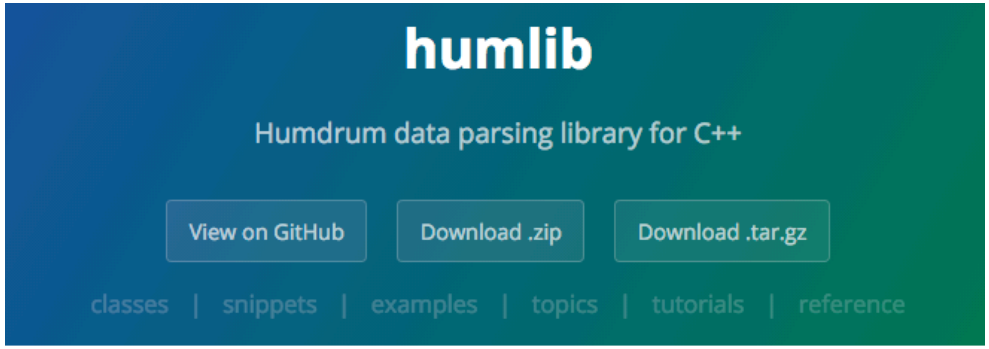
"Humdrum Extras" https://extras.humdrum.org

Humdrum Documentation

Online:	Humdrum Toolkit User Guide	http://www.humdrum.org/guide
	Humdrum Toolkit Manual	http://www.humdrum.org/man
	Humdrum Extras Manual	https://extra.humdrum.org/man
Local:	Humdrum Toolkit help	*program* -h
	Humdrum Toolkit help	man *program*
	Humdrum Extras help	*program* --options
Other:	CCARH Humdrum Portal	http://humdrum.ccarh.org

Humdrum Programming

http://humlib.humdrum.org



The humlib library is of a set of C++ classes for parsing Humdrum data files. It is easy to incorporate into your project by adding these two files:

1. An include file humlib.h
2. and a source file humlib.cpp

The source code uses some C++11-specific features, so add the `-stc=c++11` option when compiling with GNU g++ or the clang++ compiler. Also include the `-stdlib=libc++` option when compiling with clang. See the Makefile for compiling the library and Makefile.examples for compiling and linking executables.

Harmonic Tools

1. Intervals

mint: melodic intervals HT

hint: harmonic intervals HT

cint: composite intervals (counterpoint modules) HE

2. Chords

tntype: sonority types HE

sonority: triadic sonority types HE

3. Key

key/**keycor**: musical key by correlation HE/HT

mkeyscape: keyscape HE

finalis: Identify finalis tone of music HE

Humdrum Data

Download a large chunk: https://github.com/humdrum-tools/humdrum-data

Mostly from: http://kern.humdrum.org

Humdrum Extras programs can download internally:

One file: keycor h://chorales/chor001.krn

All files in a set:
```
mkdir chorales; cd chorales
humsplit h://chorales
```

Download to HT programs: humcat h://chorales/chor001.krn | key

multiple files: humcat –s h://chorales | census -k

Melodic Intervals

http://www.humdrum.org/man/mint

http://www.humdrum.org/guide/ch11

See a list of options:

mint -h

```
oznin:~ craig$ mint -h

MINT      : Determine melodic intervals between successive pitches.

     This command outputs the distance between successive pitches ex-
     pressed as diatonic interval size plus interval quality (e.g. m7).

Inputs processed:

     **kern,    **pitch,   **solfg,   **Tonh

Syntax:

     mint [-acde] [-b regexp] [-s regexp] [inputfile ...]

Options:

  -a        : output absolute pitch interval (no leading + or -)
  -c        : output compound intervals as non-compound intervals
  -d        : output diatonic interval size only, without interval quality
  -e        : with -s option, output skipped input data rather than null tokens
  -b regexp : break; do not calculate for records matching regexp
  -s regexp : skip; ignore records matching regexp; output null tokens

  Refer to reference manual for further details.
```

Local manpage:

man mint

```
mint(1)                                                          mint(1)

NAME
        mint   --  determine melodic intervals between successive pitches for
                   Humdrum inputs

SYNOPSIS
        mint  [-acd]  [-b regexp]  [-s  regexp]  [inputfile]  [  >  output-
              file.mnt]

DESCRIPTION
        The  mint  command determines the distance (interval) between succes-
        sive pitches.  Output pitch intervals are  expressed  as  a  diatonic
        interval  size  plus  interval  quality; a leading plus or minus sign
        indicates whether the interval is ascending or descending.  By way of
        illustration,  mint  will change a sequence of **pitch data tokens --
        such as C4, A4, E4 -- to the interval sequence +M6, -P4.  Each pitch-
        related  input  spine is transformed to a corresponding **mint output
        spine.

        The mint command determines melodic intervals only for  pitch  tokens
        within  individual  spines.  Pitch  intervals  across spines are not
        determined by mint.
```

mint

What are the melodic intervals in a chorale?:

mint chor001.krn | less

humcat h://chorales/chor001.krn | mint | less

What is the most common intervals in the chorale?:

ditto HT

- *hint* ignores null tokens, resulting in harmonic intervals between note attacks only
- To also include intervals to sustained intervals from previous attacks, use *ditto*
- This fills in the null token with the continuing data token it represents

ditto chor001.krn

tntype

Tool for generalized description of sonority types (pitch-class sets sounding together)

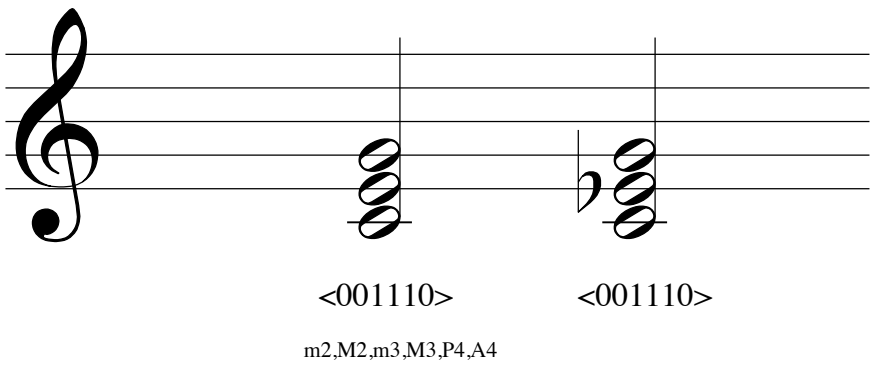
documentation: http://extras.humdrum.org/man/tntype

similar to Humdrum Toolkit command pcset http://www.humdrum.org/Humdrum/commands/pcset.html

seven successive “sonorities” present in the above music:

Interval vectors

- Similar data generated by *hint*, but more compact



- Major and minor triads have the same interval content: m3, M3, P5
- <001110> is can be represented by the Forte number enumeration 3-11.
  - 3 = three pitch classes in set
  - 11 = 11th most compact organization of 3 pitch classes

    3-1 = c,c#,d 3-2 = c,c#,d# 3-3 = c,c#,e 3-4 = c,c#,f 3-5 = c,c#,f# etc.

tntype -d

Generate a **dpc (diatonic pitch-class) spine listing unique pitch classes in sonorities

tntype –ad file.krn

```

Bach chorale sonority types

- Are there more major or minor sonorities in Bach chorales?

By musical description:

```
humcat -s h://371chorales | tntype -D | ridx –H | sort | uniq -c | sort -nr
```

By Forte number:

```
humcat -s h://371chorales | tntype | ridx –H | sort | uniq -c | sort -nr
```

- Do Bach chorales in minor keys have more major or minor sonorities?

```
humcat –s h://371chorales | humsplit
humcat -s `egrep –l "^\*[a-g][#-]?:" chor*.krn` | tntype -D | ridx –H | sort | uniq -c | sort -nr
```

- What is the most common 7th chord sonority?

sonority

- similar to tntype program but has more triad-centered descriptions of sonorities

http://extras.humdrum.org/man/sonority

sonority -a h://371chorales/chor001.krn
