Humdrum File Format

craig@ccrma.stanford.edu

6 March 2018

Humdrum File Format

- Humdrum file format is analogous to XML: organizing structure for data without concern for content.

- Each data stream is a column of data (called a *spine*) started by an exclusive interpretation which is two stars followed by the data-type name. The end of the data is marked with star-minus (not star-underscore as it may seem in the Courier font).

- Temporal: organized strictly time-wise in the data: each succeeding row comes after the preceding (contrasts with all other polyphonic data formats except MIDI Type-0 files).

- Each element on a data line occurs simultaneously in time (a4, b4, c4 occur at the same time).

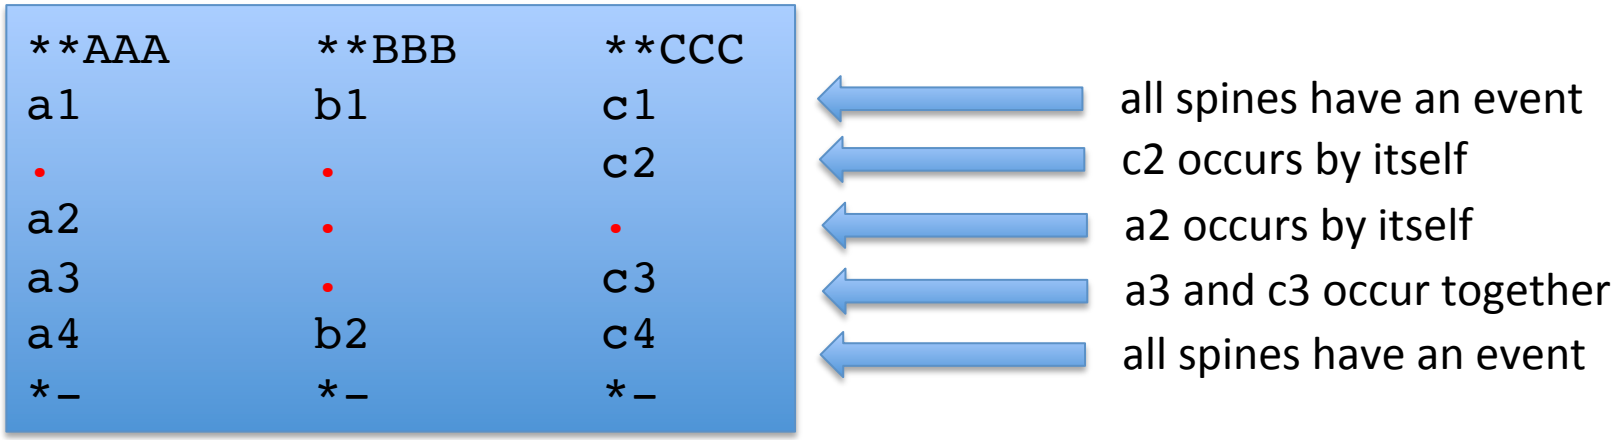
spine

**AAA	**BBB	**CCC	**exclusive interpretation (data type)**
a1	b1	c1	
a2	b2	c2	
a3	b3	c3	**data**
a4	b4	c4	
a5	b5	c5	
*-	*-	*-	**spine terminators (data end)**

Field Separator/Null Records

- Each field on a line is separated by exactly *one* tab character (may cause vertical alignment aberrations in a text editor if a field is wide).

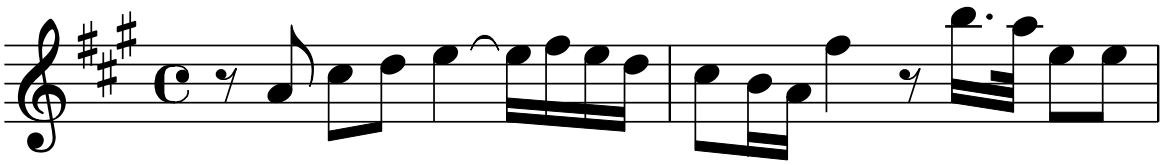
- If one spine has no event when others do, a **null token** (“.”) is used as a place holder to indicate that the previous item in the spine is still in effect.



Motivation for Humdrum format

- Reaction against the linear parsing needed in DARMS code

8-'A{"CD}4E+{6EFED}/{8C'6BA}"4F8-{6.B3A}{8EE}/



- Spreadsheet model for processing the data.

	A	B	C
1	**AAA	**BBB	**CCC
2	a1	b1	c1
3	.	.	c2
4	a2	.	.
5	a3	.	c3
6	a4	b2	c4
7	*-	*-	*-
8			

- Increased random access (e.g., no sticky settings for rhythm/octave like DARMS/Guido/Lilypond/ABC) for better **regular-expression** parsing.

```

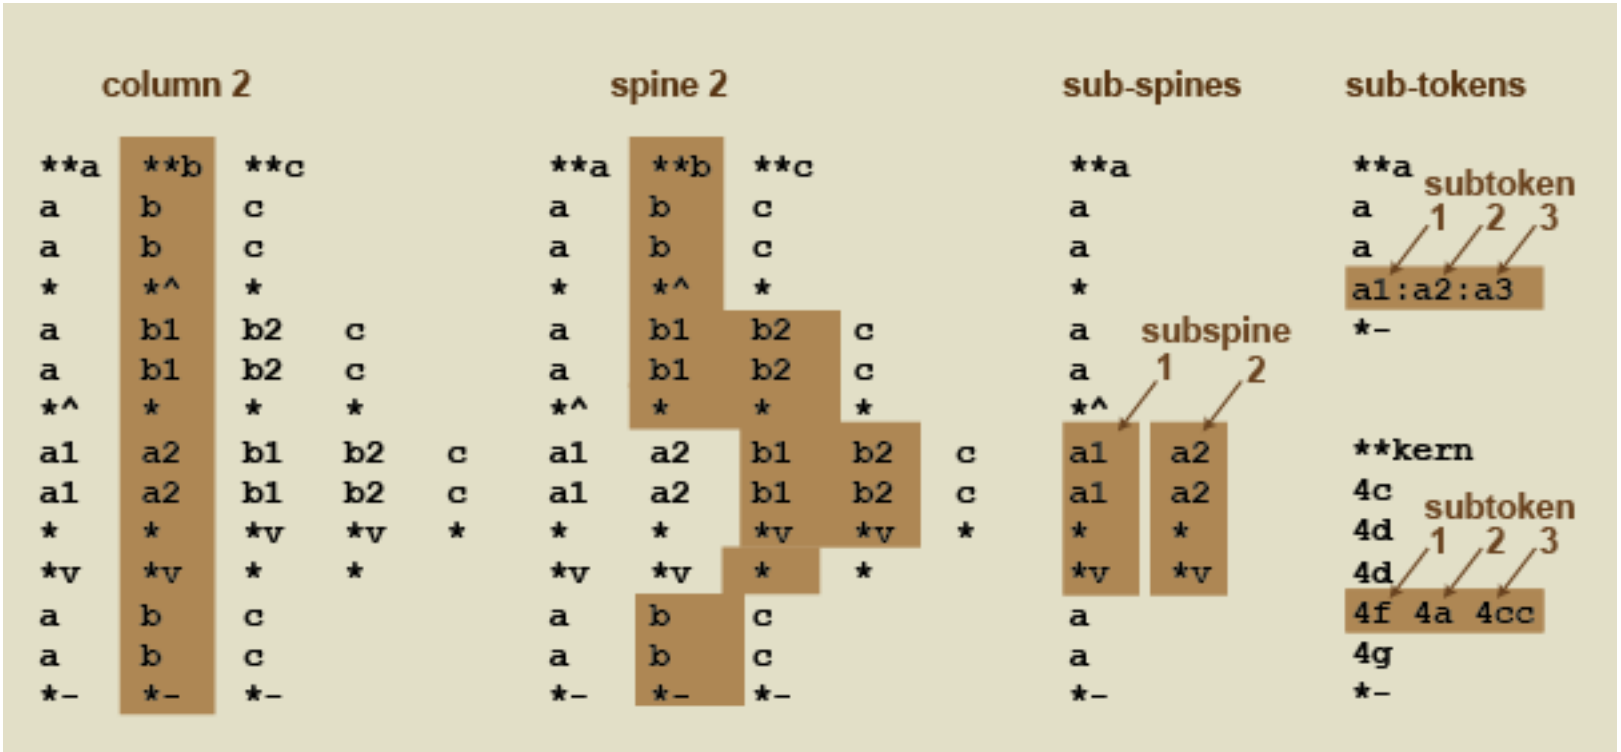
=2
*-
```

Spine Manipulators

**datatag	Exclusive interpretation
*^	Spine split (into two sub-spines)
*v	Spine merge (contiguous spines merge)
*x	Spines exchange column positions (rare)
*+	Add new spine
*-	Spine terminator (end of data for spine)
*	Null interpretation (null manipulator)



Record (line) Types

Comments (starting with !)

Reference Record (bibliographic record):

!!!key: value

Global Comment:

!!unstructured text

Local Comment:

!text

Interpretations (starting with *)

Spine Manipulators (fixed set):

**start, *^, *v, *x, *+, *-

Tandem Interpretations (data-type dependent):

*clefG2, *M4/4, *MM=120

Null interpretation (place-holder for empty interpretation)

*

Barline (starting with =)

technically a form of data in Humdrum (should be interpretation)

Data line (starting anything else)

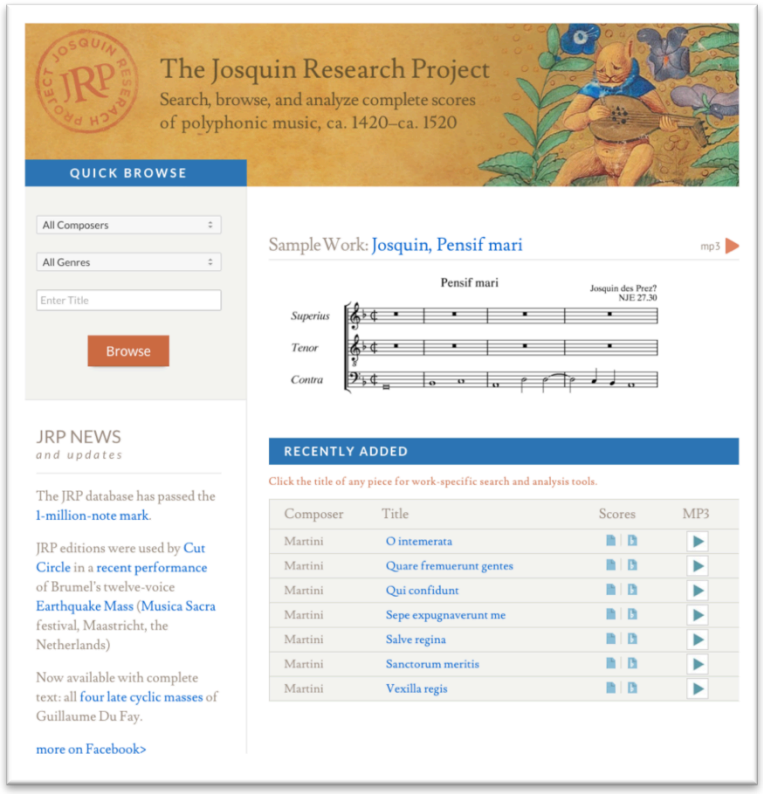
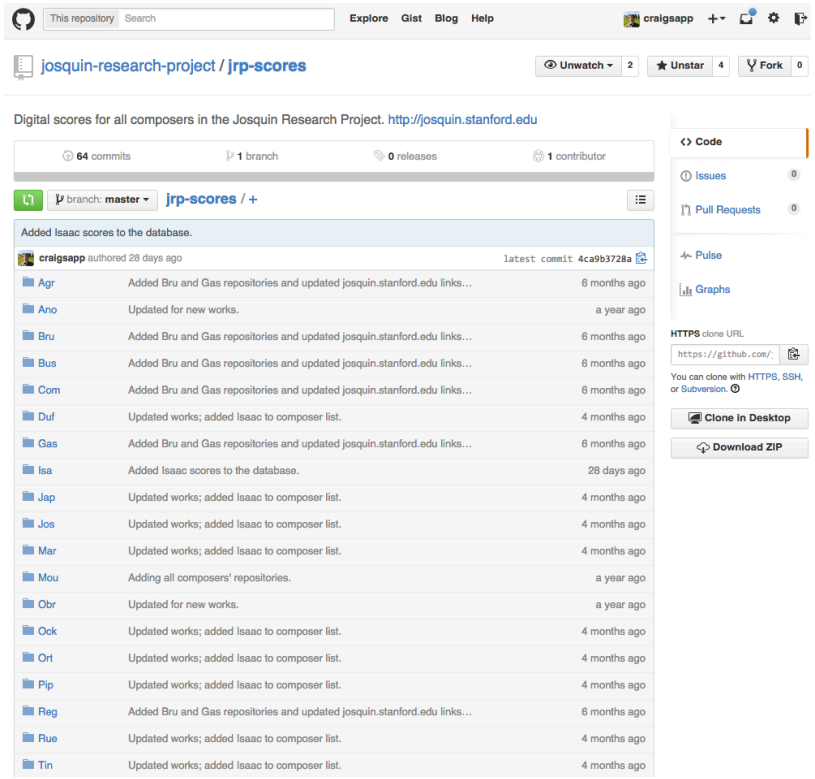
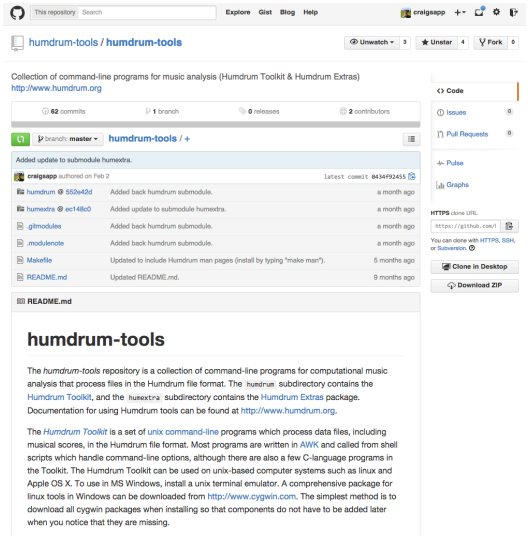
Josquin Research Project





https://github.com/josquin-research-project/jrp-scores

Github



- Install (unix) command-line utilities for procesing Humdrum data from Github

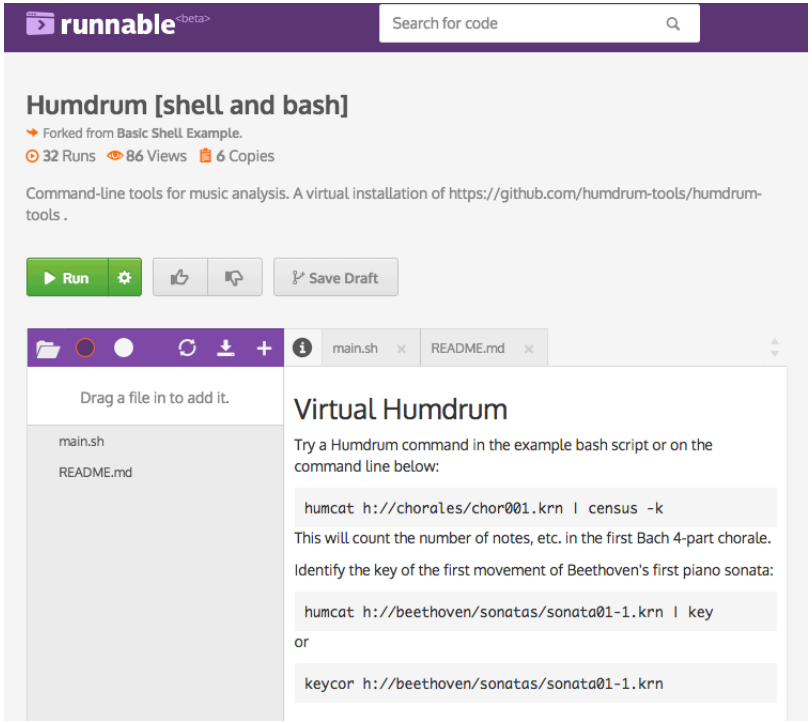
- Github repository for Humdrum tools:
  https://github.com/humdrum-tools/humdrum-tools

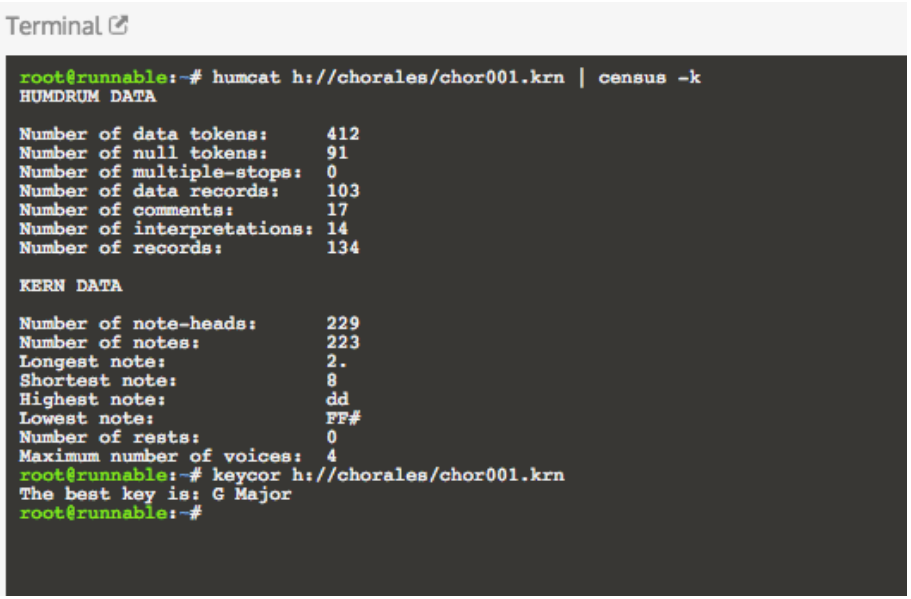
- Github repository for Humdrum data (taken from http://kern.humdrum.org website):
  https://github.com/humdrum-tools/humdrum-data

Virtual Humdrum

- Online bash shell for running Humdrum tool commands.
- Slow, but allows testing against your installation and easier than installing in Windows with cygwin

http://runnable.com/VD9ZirF3Zp1gkPZM/humdrum-for-shell-and-bash





Example problem

- Examine the trend in duple v. triple meters (mensurations) in early renaissance music

http://josquin.stanford.edu/analysis/rhythm
